

Propeller mixer for slurry lagoons 为粪污贮留池专业研发的螺旋搅拌器

August 2013

With this specially developed propeller mixer it is easy to agitate the slurry before it is brought out in the fields. The mixer is provided with protection plates so that the bottom membrane and the covering membrane not will be damaged during the agitation. The mixer also has a hydraulic system so that the propeller can be placed in the desired height. The high performance of the mixer ensures an efficient agitation of the slurry. The slurry lagoons from Millag have 2 or more openings in the cover membrane for propeller mixers. The numbers of openings depends on the size of the slurry lagoon.

采用Millag专业研发的螺旋搅拌器，在将粪污运送至田地之前，可以轻松搅拌粪污。该搅拌器配备防护板，因此在搅拌过程中，不会损坏底膜和浮动膜。同时，该搅拌器还配有液压系统，因此螺旋桨可安装在任一需求高度。该搅拌器的优越性能确保了粪污的高效混合。Millag的粪污贮留池在浮动膜上有2个或多个用于螺旋混合器的开口。开口的数量取决于粪污贮留池的大小。
