

we cover almost everything ...

Who we are ...

Millag delivers and installs plastic membranes all over the world

Millag is specialized in consultation and installation of membrane solutions, on the domestic market and abroad. Countries in which we have installed membrane solutions include Russia, China, Ukraine, Romania, Greenland and Sweden to name a few. Many of our employees have been in the business since 1997, which means that they have gained vast experience in planning and constructing membrane solutions - also in extreme conditions.

In addition, we always keep membranes on stock for immediate delivery.

Plastic membranes

- we cover almost everything...

We sell plastic membranes with many different properties, which makes it possible for us to deliver membrane solutions to a variety of situations. We focus on quality solutions, and that is why most membranes have been tested and approved by the Danish Technological Institute, which ensures that they fulfill the requirements in standard DS/INF 466.

We deliver and install membranes to many different situations, for instance:

- Sanitary landfills
- Slurry lagoons
- Water basins
- Sealing of French drains
- Radon isolation
- Green roof waterproofing
- Etc.

We offer professional consultation in regards to the products and prepare a price suggestion tailored to every project.

Slurry lagoons

Tough demands in the Danish “Landbrugets Byggeblad 103.04 - 30”

The building conditions in 103.04 - 30 describes how a slurry lagoon must be built in DK. Two of the requirements are that the lagoon should have an alarm system and a covering membrane.

The membranes have to be approved according to Danish Standard DS/INF 466 and the field engineers that weld the membranes must be certified.

Slurry lagoons built outside of Denmark can be delivered according to individual specifications, with or without alarm system and cover.

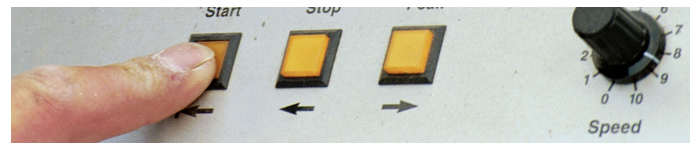

Working with membranes

HD-PE, LD-PE, FPP, R.A.C. or PVC membranes.

By keeping very close contact to the manufacturer of membranes we secure that the material that we use can meet the demands of each project.

In our warehouse we normally have most types of membranes ready for immediately delivery.

Securing the quality

The installation and assembly is done by engineers from Millag. They are certified according to Danish Standard DS 2383, which ensure that the installation fulfills the high demands of DS/INF 466.

During the assembly, welding tests are continuously performed with sophisticated equipment to ensure that the welding can meet the high quality demands.
